

BIOL2320 : Idaho Birds of Prey

This course acquaints the student with the uniqueness and diversity of Idaho's birds of prey. Through lectures, laboratory sessions and field trips, the course explores the distinguishing features for identification, distribution, natural history, and habitat requirements of most North American birds of prey. Threats to raptor populations and the conservation issues of each species are discussed throughout. This course can be used as general education laboratory credit. **Fee:** Additional fee required.
